DETAILED ACTION

Claims 1-10 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

The present invention is directed to a subminiature bone conduction speaker. Independent claims 1 and 10 identify the uniquely distinct feature of a mastoid coupled to a vibrating plate and vibrating coil and an acoustic vibrating plate coupled to an acoustic coil wherein both coils are in the magnetic gap of a ring type magnetic circuit and an electrical signal input unit applies a predetermined electrical signal to the vibrating and acoustic coils in combination with all the disclosed limitations of claims 1 and 10. The closest prior art, Kang (US 6483917) discloses a combined air-conduction and bone-conduction transducer, but fails to teach separate coils and inputs for driving the air-conduction and bone-conduction portions of the transducer; Sakai (US 6850138) discloses a vibration actuator for a cellular phone capable of producing a call sound, a voice and a vibration, but fails to teach separate coils and inputs for driving the air-conduction and bone-conduction portions of the transducer; Yoshii (JP58182398) discloses a bone conduction transducer, but fails to teach separate coils and inputs for driving the air-conduction and bone-conduction portions of the transducer; and Han (WO 02/25989 A1) discloses a subminiature bone conduction speaker, but fails to teach separate coils and inputs for driving the air-conduction and bone-conduction portions of the transducer. The prior art fails to anticipate or render the independent claims obvious.
